

IV Therapy

Reynard is one of Australia's leading manufacturers of a range of sterile and non-sterile products, which is paramount to basically every aspect of treatment in a healthcare setting. For many years Reynard has been a leading supplier of products to support IV Therapy and other similar needs, and as such, we take great care in ensuring that our IV related products continue to be the benchmark in Australia.

**See full range attached .*

! Extra large

Reynard's standard prep pads and swab sticks contain high levels of moisture and are extra-large, which allows you greater coverage of the skin. Reynard offers a wide range of different sized products with a variety of different ingredient formulas to suit every need.

✓ Convenient

Reynard prep pads and swab sticks are individually sealed in easy-tear and easy-peel open packets. Our clear prep pad and swab sticks are colour and stain-free and we also offer a range of tinted products to help with identifying where on the skin the solution has been used. The colouring is easily removed with a wet cloth.

Alcohol Only or Alcohol & Chlorhexidine available

All Reynard alcohol only products are sterilised by gamma sterilisation. We also offer a wide range of alcohol and chlorhexidine and chlorhexidine only products containing 0.5% or 2% Chlorhexidine. Chlorhexidine is a chemical antiseptic.

Suitable for all environments

Reynard Prep Pads and swab sticks are perfect use in hospitals, acupuncture, cosmetic surgery, and anywhere that requires topical cleansing prior to injection.

Product specifications and availability may vary according to country. Always read the label and product information before use.

Supporting documentation: Full technical specifications are available upon request. Bespoke solutions: Should your market require more or fewer wipes, lightly scented alternatives or even biodegradable wipes, for example, let us know. We are more than happy to develop bespoke solutions.

RHS 401 70% Alcohol & 2% Chlorhexidine Prep Pads

Reynard alcohol & chlorhexidine prep pads contain 70% isopropyl alcohol and 2% chlorhexidine. Individually sealed in easy-tear twin sachets, each pad is 6x6 cm offering a more effective pre-injection topical cleansing. Colour and stain-free.
